

HELICAL 4 ARM CENTRALIZER 1 11/16"

The HAC009 provides effective centralisation for down hole tools with 15/16-10 UN-2A Threads (15/16 Sucker Rod Connections).

SKU: HAC009

Category: [Production Logging](#)

PRODUCT DESCRIPTION

The HAC009 provides effective centralisation for down hole tools with 15/16-10 UN-2A Threads (15/16 Sucker Rod Connections).

Operating effectively in tubing or casing up to 9-5/8" the HAC has been designed to place the rollers precisely where they need to be. A constant force across its opening range ensures optimum string centralization and it is well suited to memory Production Logging or Memory Calliper operations.

The HAC boasts reduced component count through the use of common parts reducing your inventory and cost.

Tungsten Carbide rollers with replaceable bushes are used and provide an extremely long service life and the tool is fitted with Elgiloy springs as standard.

Features / Applications

- Centralization of logging tools/gauges etc. at any well deviation
- Reduction of drag/friction during well entry
- Low component count and common parts reducing spares inventory
